

## Correlation and Regression (CO-1)

S.No	QUESTION																										
	<b>Correlation</b>																										
1.	Calculate Karl Pearson's coefficient of correlation. <table><tr><td>x:</td><td>23</td><td>27</td><td>28</td><td>29</td><td>30</td><td>31</td><td>33</td><td>35</td><td>36</td><td>39</td></tr><tr><td>y:</td><td>18</td><td>22</td><td>23</td><td>24</td><td>25</td><td>26</td><td>28</td><td>29</td><td>30</td><td>32</td></tr></table>	x:	23	27	28	29	30	31	33	35	36	39	y:	18	22	23	24	25	26	28	29	30	32				
x:	23	27	28	29	30	31	33	35	36	39																	
y:	18	22	23	24	25	26	28	29	30	32																	
2.	Obtain the rank correlation coefficient from the following data <table><tr><td>x:</td><td>10</td><td>12</td><td>18</td><td>18</td><td>15</td><td>40</td></tr><tr><td>y:</td><td>12</td><td>18</td><td>25</td><td>25</td><td>50</td><td>25</td></tr></table>	x:	10	12	18	18	15	40	y:	12	18	25	25	50	25												
x:	10	12	18	18	15	40																					
y:	12	18	25	25	50	25																					
3.	Calculate rank correlation coefficient and coefficient of correlation for the following data And interpret your result. <table><tr><td>x:</td><td>12</td><td>17</td><td>22</td><td>27</td><td>32</td></tr><tr><td>y:</td><td>113</td><td>119</td><td>117</td><td>115</td><td>121</td></tr></table>	x:	12	17	22	27	32	y:	113	119	117	115	121														
x:	12	17	22	27	32																						
y:	113	119	117	115	121																						
4.	From the data calculate Karl Pearson's correlation between x & y. <table><tr><td>x:</td><td>36</td><td>56</td><td>20</td><td>42</td><td>33</td><td>44</td><td>50</td><td>15</td><td>60</td></tr><tr><td>y:</td><td>50</td><td>35</td><td>70</td><td>58</td><td>75</td><td>60</td><td>45</td><td>80</td><td>38</td></tr></table>	x:	36	56	20	42	33	44	50	15	60	y:	50	35	70	58	75	60	45	80	38						
x:	36	56	20	42	33	44	50	15	60																		
y:	50	35	70	58	75	60	45	80	38																		
5.	From the data calculate Spearmen's rank correlation between x & y. <table><tr><td>x:</td><td>36</td><td>56</td><td>20</td><td>42</td><td>33</td><td>44</td><td>50</td><td>15</td><td>60</td></tr><tr><td>y:</td><td>50</td><td>35</td><td>70</td><td>58</td><td>75</td><td>60</td><td>45</td><td>80</td><td>38</td></tr></table>	x:	36	56	20	42	33	44	50	15	60	y:	50	35	70	58	75	60	45	80	38						
x:	36	56	20	42	33	44	50	15	60																		
y:	50	35	70	58	75	60	45	80	38																		
6.	Determine the coefficient of rank correlation from the following data- <table><tr><td>x:</td><td>68</td><td>64</td><td>75</td><td>50</td><td>64</td><td>80</td><td>75</td><td>40</td><td>55</td><td>64</td></tr><tr><td>y:</td><td>62</td><td>58</td><td>68</td><td>45</td><td>81</td><td>60</td><td>68</td><td>48</td><td>50</td><td>70</td></tr></table>	x:	68	64	75	50	64	80	75	40	55	64	y:	62	58	68	45	81	60	68	48	50	70				
x:	68	64	75	50	64	80	75	40	55	64																	
y:	62	58	68	45	81	60	68	48	50	70																	
7.	Determine the Karl Pearson's coefficient of correlation from the following data- <table><tr><td>x:</td><td>68</td><td>64</td><td>75</td><td>50</td><td>64</td><td>80</td><td>75</td><td>40</td><td>55</td><td>64</td></tr><tr><td>y:</td><td>62</td><td>58</td><td>68</td><td>45</td><td>81</td><td>60</td><td>68</td><td>48</td><td>50</td><td>70</td></tr></table>	x:	68	64	75	50	64	80	75	40	55	64	y:	62	58	68	45	81	60	68	48	50	70				
x:	68	64	75	50	64	80	75	40	55	64																	
y:	62	58	68	45	81	60	68	48	50	70																	
8.	Find Karl Pearson's coefficient of correlation for the indices of supply and price of an article. <table><tr><td>Supply Index:</td><td>124</td><td>100</td><td>112</td><td>102</td><td>93</td><td>99</td><td>104</td><td>99</td><td>113</td><td>103</td><td>101</td></tr><tr><td>Price Index:</td><td>80</td><td>100</td><td>91</td><td>100</td><td>111</td><td>109</td><td>104</td><td>111</td><td>102</td><td>111</td><td>123</td></tr></table>	Supply Index:	124	100	112	102	93	99	104	99	113	103	101	Price Index:	80	100	91	100	111	109	104	111	102	111	123		
Supply Index:	124	100	112	102	93	99	104	99	113	103	101																
Price Index:	80	100	91	100	111	109	104	111	102	111	123																
9.	Calculate the coefficient of correlation between the indices of business activity (X) and employment (Y) from the following data. X : 100, 102, 108, 111, 115, 116, 118. Y : 100, 100, 104, 108, 112, 119, 120.																										
10	.For 10 pairs of values of x and y the following values are determined: Later on it was found that one pair of values was taken as (34, 47) instead of (43, 74) .Determine the correct value of the coefficient of correlation if Mean(X) = 30.1, Mean(Y) = 47.8, S.D.(X)=6.2, S.D.(Y)=9.5, r= 0.72																										
11	The coefficient of rank correlation of the marks obtained by 10 students in Physics and chemistry was found to be 0.5. It was later discovered that the differences in ranks in the two subjects obtained by one of the students was wrongly taken as 3 instead of 7. Find the correct coefficient of rank correlation.																										
12	Soil temperature (x) and germination (y) for winter wheat in 12 places are as follows. Determine the correct value of the coefficient of correlation <table><tr><td><math>x (^{\circ}F)</math></td><td>57</td><td>42</td><td>38</td><td>42</td><td>45</td><td>42</td><td>44</td><td>40</td><td>46</td><td>44</td><td>43</td><td>40</td></tr><tr><td>y(days)</td><td>10</td><td>26</td><td>41</td><td>29</td><td>27</td><td>27</td><td>19</td><td>18</td><td>19</td><td>31</td><td>29</td><td>33</td></tr></table>	$x (^{\circ}F)$	57	42	38	42	45	42	44	40	46	44	43	40	y(days)	10	26	41	29	27	27	19	18	19	31	29	33
$x (^{\circ}F)$	57	42	38	42	45	42	44	40	46	44	43	40															
y(days)	10	26	41	29	27	27	19	18	19	31	29	33															

13	Find the coefficient of correlation 'r' between the heights of father (x) and sons (y) from the following data.																								
	<table><tr><td>x:</td><td>65</td><td>66</td><td>67</td><td>68</td><td>69</td><td>70</td><td>71</td><td>67</td></tr><tr><td>y:</td><td>67</td><td>68</td><td>64</td><td>72</td><td>70</td><td>67</td><td>70</td><td>68</td></tr></table>	x:	65	66	67	68	69	70	71	67	y:	67	68	64	72	70	67	70	68						
x:	65	66	67	68	69	70	71	67																	
y:	67	68	64	72	70	67	70	68																	
14	The panel of two judges A & B graded dramatic performance by independently awarding marks as follows. eight performance, however, which judge B could not attend, got 38 marks by judge A. if judge B had also present, how many marks would he be expected to have awarded to the eight performance?																								
	<table><tr><td>Performance No.</td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td></tr><tr><td>Marks by A</td><td>36</td><td>32</td><td>34</td><td>31</td><td>31</td><td>32</td><td>35</td></tr><tr><td>Marks by B</td><td>35</td><td>33</td><td>31</td><td>30</td><td>34</td><td>32</td><td>36</td></tr></table>	Performance No.	1	2	3	4	5	6	7	Marks by A	36	32	34	31	31	32	35	Marks by B	35	33	31	30	34	32	36
Performance No.	1	2	3	4	5	6	7																		
Marks by A	36	32	34	31	31	32	35																		
Marks by B	35	33	31	30	34	32	36																		
15	Compute Spearman's rank correlation coefficient from the following data. X : 85, 74, 85, 50, 65, 78, 74, 60, 74, 90. Y : 78, 91, 78, 58, 60, 72, 80, 55, 68, 70.																								
16	Calculate the Spearman's rank correlation coefficient from the following data. X : 23, 27, 28, 29, 30, 31, 33, 35, 36, 39. Y : 18, 22, 23, 24, 25, 26, 28, 29, 30, 32.																								
17	Calculate the correlation coefficient from the following data. X : 23, 27, 28, 29, 30, 31, 33, 35, 36, 39. Y : 18, 22, 23, 24, 25, 26, 28, 29, 30, 32.																								
18	A sample of 25 pairs of values of x and y lead to the following results. $\sum x = 127$ , $\sum y = 100$ , $\sum x^2 = 760$ , $\sum y^2 = 449$ , $\sum xy = 500$ . Later on it was found that two pairs of values were taken as (8,14) and (8,6) instead of correct values (8,12) and (6,8). Find corrected correlation coefficient between x and y.																								
19	Calculate the coefficient of correlation between the indices of business activity (X) and employment (Y) from the following data. X : 100, 102, 108, 111, 115, 116, 118. Y : 100, 100, 104, 108, 112, 119, 120.																								
20	Compute Spearman's rank correlation coefficient from the following data. X : 32, 55, 49, 60, 43, 37, 43, 49, 10, 20. Y : 40, 30, 70, 20, 30, 50, 72, 60, 45, 25.																								
21	The values of demand and the corresponding price of a commodity are given in the following table. Find Karl Pearson's coefficient of correlation.																								
	<table><tr><td>Demand in quintals</td><td>65</td><td>66</td><td>67</td><td>67</td><td>68</td><td>69</td><td>70</td><td>72</td></tr><tr><td>Price in Rs per kg</td><td>67</td><td>68</td><td>69</td><td>68</td><td>72</td><td>72</td><td>68</td><td>71</td></tr></table>	Demand in quintals	65	66	67	67	68	69	70	72	Price in Rs per kg	67	68	69	68	72	72	68	71						
Demand in quintals	65	66	67	67	68	69	70	72																	
Price in Rs per kg	67	68	69	68	72	72	68	71																	
22	In two sets of variables x and y with 50 observations each gave the results $\bar{x} = 10$ , $\bar{y} = 6$ , $\sigma_x = 3$ $\sigma_y = 2$ , $r = 0.3$ . But on subsequent verification it was found that one value of x=10 and one value of y=6 were inaccurate and were discarded. With the remaining 49 pairs of values how is the original value of 'r' affected?																								
23	Calculate coefficient of correlation using change of scale and origin																								
	<table><tr><td>X</td><td>1200</td><td>1300</td><td>1400</td><td>1500</td><td>1600</td><td>1700</td><td>1800</td><td>1900</td></tr><tr><td>Y</td><td>5445</td><td>6145</td><td>6645</td><td>7045</td><td>7445</td><td>7845</td><td>8545</td><td>8945</td></tr></table>	X	1200	1300	1400	1500	1600	1700	1800	1900	Y	5445	6145	6645	7045	7445	7845	8545	8945						
X	1200	1300	1400	1500	1600	1700	1800	1900																	
Y	5445	6145	6645	7045	7445	7845	8545	8945																	
24	Obtain the rank correlation coefficient from the following data. X : 18, 20, 34, 52, 12 Y : 39, 23, 35, 18, 46.																								
25	Compute Rank correlation coefficient from the following data																								
	<table><tr><td>x</td><td>105</td><td>104</td><td>102</td><td>101</td><td>100</td><td>99</td><td>98</td><td>96</td><td>93</td><td>92</td></tr><tr><td>y</td><td>101</td><td>103</td><td>100</td><td>98</td><td>95</td><td>96</td><td>104</td><td>92</td><td>97</td><td>94</td></tr></table>	x	105	104	102	101	100	99	98	96	93	92	y	101	103	100	98	95	96	104	92	97	94		
x	105	104	102	101	100	99	98	96	93	92															
y	101	103	100	98	95	96	104	92	97	94															
26	Following data gave the growth of employment in lakhs in organised sector of India																								

	between 1988 and 1995. Find the correlation coefficient between the employment in Public and Private sector and give the comment.																																	
	<table><tr><td>year</td><td>88</td><td>89</td><td>90</td><td>91</td><td>92</td><td>93</td><td>94</td><td>95</td></tr><tr><td>Public sector</td><td>98</td><td>101</td><td>104</td><td>107</td><td>113</td><td>120</td><td>125</td><td>128</td></tr><tr><td>Private sector</td><td>65</td><td>65</td><td>67</td><td>68</td><td>68</td><td>69</td><td>68</td><td>68</td></tr></table>	year	88	89	90	91	92	93	94	95	Public sector	98	101	104	107	113	120	125	128	Private sector	65	65	67	68	68	69	68	68						
year	88	89	90	91	92	93	94	95																										
Public sector	98	101	104	107	113	120	125	128																										
Private sector	65	65	67	68	68	69	68	68																										
27	Following table shows the marks obtained by 8 students in Accountancy and Statistics. Spearman's coefficient of rank correlation <table><tr><td>Student No</td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td></td><td></td></tr><tr><td>Accountancy</td><td>45</td><td>70</td><td>65</td><td>30</td><td>90</td><td>40</td><td>50</td><td>57</td><td></td><td></td></tr><tr><td>Statistics</td><td>35</td><td>90</td><td>70</td><td>40</td><td>95</td><td>40</td><td>60</td><td>80</td><td></td><td></td></tr></table> (i)Will the result change if the marks of the two subjects of all the students are increased by 5 (ii) Will the result change if the marks of the two subjects of all the students are halved ?	Student No	1	2	3	4	5	6	7	8			Accountancy	45	70	65	30	90	40	50	57			Statistics	35	90	70	40	95	40	60	80		
Student No	1	2	3	4	5	6	7	8																										
Accountancy	45	70	65	30	90	40	50	57																										
Statistics	35	90	70	40	95	40	60	80																										
28	Calculate the correlation coefficient from the following data $N=9, \sum X=45, \sum Y=108, \sum X^2=285, \sum Y^2=1356, \sum XY=597$																																	
29	Ten competitors in a beauty contest are ranked by three judges in the following order.Use the method of rank correlation coefficient to determine <table><tr><td>First Judge</td><td>1</td><td>6</td><td>5</td><td>10</td><td>3</td><td>2</td><td>4</td><td>9</td><td>7</td><td>8</td></tr><tr><td>Second Judge</td><td>3</td><td>5</td><td>8</td><td>4</td><td>7</td><td>10</td><td>2</td><td>1</td><td>6</td><td>9</td></tr><tr><td>Third Judge</td><td>6</td><td>4</td><td>9</td><td>8</td><td>1</td><td>2</td><td>3</td><td>10</td><td>5</td><td>7</td></tr></table> which pair of judges has the nearest approach to common taste in beauty?	First Judge	1	6	5	10	3	2	4	9	7	8	Second Judge	3	5	8	4	7	10	2	1	6	9	Third Judge	6	4	9	8	1	2	3	10	5	7
First Judge	1	6	5	10	3	2	4	9	7	8																								
Second Judge	3	5	8	4	7	10	2	1	6	9																								
Third Judge	6	4	9	8	1	2	3	10	5	7																								
30	Calculate rank correlation coefficient of the following data <table><tr><td>Subject 1</td><td>40</td><td>46</td><td>54</td><td>60</td><td>70</td><td>80</td><td>82</td><td>85</td><td>87</td><td>90</td><td>95</td></tr><tr><td>Subject 2</td><td>45</td><td>46</td><td>50</td><td>43</td><td>40</td><td>75</td><td>55</td><td>72</td><td>65</td><td>42</td><td>70</td></tr></table>	Subject 1	40	46	54	60	70	80	82	85	87	90	95	Subject 2	45	46	50	43	40	75	55	72	65	42	70									
Subject 1	40	46	54	60	70	80	82	85	87	90	95																							
Subject 2	45	46	50	43	40	75	55	72	65	42	70																							
31	Calculate coefficient of correlation for the ages of husbands and their respective wives: <table><tr><td>Age of husbands</td><td>23</td><td>27</td><td>28</td><td>29</td><td>30</td><td>31</td><td>33</td><td>35</td><td>36</td><td>39</td></tr><tr><td>Age of wives</td><td>18</td><td>22</td><td>23</td><td>24</td><td>25</td><td>26</td><td>28</td><td>29</td><td>30</td><td>32</td></tr></table>	Age of husbands	23	27	28	29	30	31	33	35	36	39	Age of wives	18	22	23	24	25	26	28	29	30	32											
Age of husbands	23	27	28	29	30	31	33	35	36	39																								
Age of wives	18	22	23	24	25	26	28	29	30	32																								
32	Calculate the coefficient of correlation between X and Y series from the following data.Summation of product deviations of X and Y series from their respective arithmetic means is 122. <table><tr><td></td><td>No of pairs of observations</td><td>Arithmetic mean</td><td>Standard Deviation</td><td>Sum of squares of deviations from the arithmetic mean</td></tr><tr><td>X</td><td>15</td><td>25</td><td>3.01</td><td>136</td></tr><tr><td>Y</td><td>15</td><td>18</td><td>3.02</td><td>138</td></tr></table>		No of pairs of observations	Arithmetic mean	Standard Deviation	Sum of squares of deviations from the arithmetic mean	X	15	25	3.01	136	Y	15	18	3.02	138																		
	No of pairs of observations	Arithmetic mean	Standard Deviation	Sum of squares of deviations from the arithmetic mean																														
X	15	25	3.01	136																														
Y	15	18	3.02	138																														
33	Calculate coefficient of correlation using change of scale and origin <table><tr><td>X</td><td>230</td><td>270</td><td>280</td><td>290</td><td>300</td><td>310</td><td>330</td><td>350</td><td>360</td><td>390</td></tr><tr><td>Y</td><td>1890</td><td>2290</td><td>2390</td><td>2490</td><td>2590</td><td>2690</td><td>2890</td><td>2990</td><td>3090</td><td>3290</td></tr></table>	X	230	270	280	290	300	310	330	350	360	390	Y	1890	2290	2390	2490	2590	2690	2890	2990	3090	3290

y	84	51	47	53	58	86	68	60	91	70													
49	If $R_{xy} = 0.143$ and the sum of squares of the differences between the ranks is 48, find $N$ .																						
50	If $r_{xy} = 0.4$ , $cov(x, y) = 2.4$ , $\sigma_y^2 = 36$ . Find $\sigma_x$																						
51	The equations of the two regression lines are $3x + 2y = 26$ and $6x + y = 31$ . Find (i) The means of $x$ and $y$ and (ii) Coefficient of correlation between $x$ and $y$ .																						
52	It is given that the mean $x$ and $y$ are 5 and 10. If the line of regression of $y$ on $x$ is parallel to the line $20y = 9x + 40$ . Estimate the value of $y$ for $x = 30$ .																						
53	The regression equations of $y$ on $x$ and of $x$ on $y$ are $y = x$ and $4x - y = 3$ respectively and the second moment of $x$ about the origin is 2. Find (i) the mean of $x$ & mean of $y$ . (ii) correlation coeff (iii) standard deviation of $x$ & $y$ .																						
54	The equations of the two lines of regression for a bivariate data are $9x + 10y - 67 = 0$ , and $5x + 2y - 23 = 0$ Find i) mean values of $x$ and $y$ , ii) regression coefficient, iii) correlation coefficient.																						
55	<p>Given <math>6y = 5x + 90</math>, <math>15x = 8y + 130</math>, <math>\sigma_x^2 = 16</math>.</p> <p>Find i) <math>\bar{x}</math> and <math>\bar{y}</math> ii) Correlation coefficient, iii) <math>\sigma_y^2</math></p>																						
56	In a partially destroyed laboratory record of analysis of correlation data, following results are legible. Variance of $x=9$ , equations of the lines of regression $4x - 5y + 33 = 0$ , $20x - 9y - 107 = 0$ . Find (i) the mean values of $x$ and $y$ , (ii) the standard deviation of $y$ , (iii) coefficient of correlation.																						
57	The regression lines of a sample are $x + 6y = 6$ and $3x = 2y + 10$ Find (i) $\bar{x}$ and $\bar{y}$ (ii) correlation coefficient. Also estimate $y$ when $x = 12$ . Also verify that the sum of the coefficients of regression is greater than $2r$																						
58	State true or false with reasoning: “ $2x + y = 3$ and $x = 2y + 3$ cannot be the lines of regression.”																						
59	If the tangent of the angle made by the lines of regression of $y$ on $x$ is 0.6 and $\sigma_y = 2\sigma_x$ , find the correlation coefficient between $x$ and $y$ .																						
60	In a regression analysis, it is found that $b_{yx} = 0.87$ , $b_{xy} = 1.55$ . Can these values be regarded as consistent values and why?																						
61	(i) Let $r_{xy} = 0.4$ , $Cov(x, y) = 1.6$ , $\sigma_y^2 = 25$ . find $\sigma_x$ . (ii) If $R_{x,y} = 0.143$ and the sum of the squares of the differences between the ranks is 48, find $n$ .																						
62	If $\sigma_x = \sigma_y = \sigma$ and the angle between the lines of regression is $\tan^{-1} 3$ , find the coefficient of correlation.																						

63	Find the regression coefficients & the coefficient of correlation $N = 12, \sum x = 120, \sum y = 432, \sum xy = 4992, \sum x^2 = 1392, \sum y^2 = 18252.$																				
64	<table border="1"><tr><td>x</td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td></tr><tr><td>y</td><td>9</td><td>8</td><td>10</td><td>12</td><td>11</td><td>13</td><td>14</td><td>16</td><td>15</td></tr></table> Find the lines of regression.?	x	1	2	3	4	5	6	7	8	9	y	9	8	10	12	11	13	14	16	15
